

**The 6th International Conference on
Social Sciences and Intelligence Management (SSIM 2026)**
December 17–19, 2026, Chaoyang University of Technology, Taichung, Taiwan

**Special Session on
Computational Approaches to Language Education,
EMI, and Intelligent Communication Systems**

Call for Papers

Organizers: Dr. Chian-Wen Kao and Dr. Wen-Chi Hu

Introduction

The rapid integration of artificial intelligence, natural language processing (NLP), and data-driven technologies into language education and communication contexts has created a new frontier for computational and empirical research. Intelligent language systems are reshaping how learners acquire language, how instructors design assessments, how institutions implement English-Medium Instruction (EMI) policies, and how digital platforms mediate cross-cultural communication.

This special session, “Computational Approaches to Language Education, EMI, and Intelligent Communication Systems,” invites original, empirical, and system-oriented research that applies computational methods, intelligent technologies, or quantitative frameworks to investigate language learning, language assessment, instructional design, and AI-mediated communication. We particularly encourage submissions that contribute technical systems, datasets, evaluation frameworks, or reproducible methodologies that advance the field of language technology and its applications in educational and professional settings.

The session bridges applied linguistics and computer science, targeting researchers who employ machine learning, computational modeling, corpus analysis, learning analytics, or intelligent system design to address real-world challenges in language education and communication.

Topics of Interest

Topics include but are not limited to the following:

I. Intelligent Language Learning Systems and NLP Applications

- AI-assisted language learning platforms: architectures, algorithms, and pedagogical evaluation
- Natural language processing (NLP) for automated grammar feedback, error correction, and learner modeling
- Large language models (LLMs) in language education: affordances, limitations, and user studies
- Conversational agents and chatbots for language practice and scaffolding
- Computational modeling of second language acquisition (SLA) processes

II. Intelligent Language Assessment and Learning Analytics

- Automated writing evaluation (AWE) systems: design, scoring algorithms, and validity studies
- Machine learning approaches to formative and summative language assessment
- Learning analytics dashboards for language classrooms: data modeling and instructional impact
- Predictive modeling of language learning outcomes and proficiency trajectories
- Computational approaches to oral proficiency assessment and speech recognition in L2 contexts

III. Computational Linguistics and Corpus-Based Research

- Corpus linguistics methodologies applied to EMI discourse, academic writing, and intercultural communication
- Computational discourse analysis: coherence, cohesion, and argumentation modeling
- Text mining and topic modeling of learner-generated corpora
- Cross-linguistic transfer and computational models of bilingual language processing
- Digital annotation tools and computational frameworks for applied linguistics research

IV. EMI, Digital Communication, and AI-Mediated Interaction

- Data-driven studies of English-Medium Instruction (EMI): classroom discourse, comprehension, and outcomes
- AI-mediated communication in multilingual and multicultural academic environments
- Digital platforms and intelligent tools for academic and intercultural communication
- Human–AI interaction in language learning: user experience, agency, and equity
- Multimodal analysis of AI-assisted communication: text, speech, and gesture

V. Ethics, Equity, and Governance of AI in Language Education

- Algorithmic bias and fairness in automated language assessment systems
- Data privacy, consent, and ethical frameworks for learner data use in intelligent systems
- AI literacy and digital competence: empirical frameworks and measurement instruments
- Policy analysis of AI adoption in EMI and bilingual education programs
- Equity and access in AI-supported language education across diverse learner populations

Submission Guidelines

We invite original research papers, system demonstrations, empirical studies, and technical reports. Submissions should present novel computational, data-driven, or system-design contributions to language education or applied linguistics. Purely descriptive or non-empirical papers without a quantitative, computational, or technological component are outside the scope of this track.

Submission requirements:

- Full papers: 12–15 pages (Springer LNCS format), presenting complete research with methodology, results, and evaluation
- Short papers: 6–11 pages, presenting work-in-progress, system descriptions, or pilot studies
- All submissions must follow the Springer LNCS/CCIS author template available on the SSIM 2026 website
- Papers must be submitted via the Microsoft CMT system, selecting Subject Area: Track 3 — Computational Approaches to Language Education, EMI, and Intelligent Communication Systems
- All submissions will undergo double-blind peer review by at least three qualified reviewers with expertise in NLP, educational technology, computational linguistics, or applied linguistics

Please visit the SSIM 2026 official website for templates and submission instructions

Publication

Papers that are presented orally at the conference and meet the publication requirements of SSIM 2026 conference proceedings will be considered for publication in Springer conference proceedings. The primary publication plan is within Springer's Communications in Computer and Information Science (CCIS) series. Depending on the thematic focus of accepted papers and the final publication arrangement, selected papers may also be included in a Springer Information and Computer Science / Intelligent Systems-related proceedings series, similar to the publication model adopted by SSIM 2025.

All publication arrangements are subject to Springer's final review and approval processes. Accepted papers must satisfy the academic quality standards and formatting requirements specified by both SSIM 2026 and the designated Springer publication series.

Conference proceedings published by Springer are typically submitted for indexing in major academic databases, which may include Scopus, depending on the specific series and indexing policies at the time of publication.

Important Dates

- **Abstract Submission Deadline:** September 10, 2026
- **Notification of Abstract Acceptance:** September 25, 2026
- **Full Paper Submission Deadline:** October 15, 2026
- **Notification of Full Paper Acceptance:** November 20, 2026
- **Camera-Ready Paper Deadline:** December 10, 2026
- **Conference Dates:** December 17–19, 2026

If SSIM extends the dates, updated deadlines will be announced on the official conference website.
